# SQL Server goes WinPhone

Diese Session zeigt in drei steps eine End-to-End Lösung

- zunächst die WinPhone Verbindung vom SQL-Server via ASP.net Web API zum WinPhone
- eine Service-Bus Verbindung mit zwei C# console apps
- und im Anschluß eine mobile-to-mobile Verbindung mit den Azure mobile-Services in Verbindung mit dem Servicebus.

# REST service

- REST ist eine Abstraktion der Struktur und des Verhaltens des World Wide Web.
- Jeder REST-konforme Dienst hat eine eindeutige Adresse, den Uniform Resource Locator (URL)
- Zusätzlich zum URL verwendet REST auch Uniform Resource Identifier (URI), um einzelne Ressourcen zu bezeichnen.
- [http://de.wikipedia.org/wiki/Representational State Transfer](http://de.wikipedia.org/wiki/Representational_State_Transfer)

# REST service in der Praxis
